Abnormal values should be correlated with symptoms, medications, hydration status, and department-specific care goals. High BNP or low eGFR should trigger clinician review before medication changes.

Trend Notes For AI Extraction

Renal Labs

Creatinine and eGFR are included for renal dosing and medication safety retrieval. Monitor K when ACEI, ARB, spironolactone, or diuretics are active.

Medication Safety Linkage

The lab trend is intended to link to medication_safety and renal_labs retrieval scopes. Pharmacist review is recommended for high-risk drug-lab combinations.
