Subjective

Bui Duc Hung is a 47-year-old patient in Oncology presenting for follow-up of fatigue and treatment-related symptom burden. PMH includes chemotherapy exposure, fatigue, anemia risk, neutropenia precautions reviewed. Patient reports symptoms are stable overall. Denies severe chest pain, syncope, active bleeding, or new focal neurologic deficit unless otherwise documented. Current meds include ondansetron 4mg Q8H PRN; pantoprazole 40mg daily; ferrous sulfate 325mg daily. Allergies: penicillin allergy - rash.

Objective

Vitals: BP 139/69 mmHg, HR 91 bpm, RR 19/min, Temp 36.5 C, SpO2 93% RA, weight 84 kg. Exam: alert, oriented, no acute distress. Cardiopulmonary exam without unstable findings. Abdomen soft, non-tender. Extremities show no acute deformity; edema varies by department-specific condition. Labs reviewed below; medication list reconciled.

Assessment

Primary assessment: active malignancy on treatment with anemia and infection risk monitoring. Patient is clinically stable for ongoing management. Risk considerations include renal dosing, medication safety, fall risk, and need for timely escalation if red-flag symptoms occur.

Plan

Trend CBC, AST, ALT, and renal function. Assess fever, mucositis, and hydration at each contact. Coordinate oncology follow-up and treatment schedule. Provide patient education, update care team via SBAR, and document any access-relevant clinical justification before AI-assisted retrieval of PHI.

Detailed Care Coordination Notes

Problem List

1. active malignancy on treatment with anemia and infection risk monitoring. 2. Medication safety monitoring. 3. Functional status and discharge readiness. 4. Follow-up coordination with Oncology.

Safety Triggers

Escalate to responsible clinician for SBP < 90, HR > 130, SpO2 < 92%, acute mental status change, active bleeding, severe pain, fever with neutropenia risk, or rapidly rising Cr/K.
