Subjective

Tran Huu Cuong is a 36-year-old patient in Obstetrics & Gynecology presenting for follow-up of routine follow-up with screening and safety counseling. PMH includes routine follow-up, denies heavy bleeding, pain, or fever unless noted. Patient reports symptoms are stable overall. Denies severe chest pain, syncope, active bleeding, or new focal neurologic deficit unless otherwise documented. Current meds include prenatal vitamin daily; ferrous sulfate 325mg daily; acetaminophen 500mg QID PRN. Allergies: sulfonamide allergy - hives.

Objective

Vitals: BP 136/66 mmHg, HR 88 bpm, RR 16/min, Temp 36.9 C, SpO2 97% RA, weight 81 kg. Exam: alert, oriented, no acute distress. Cardiopulmonary exam without unstable findings. Abdomen soft, non-tender. Extremities show no acute deformity; edema varies by department-specific condition. Labs reviewed below; medication list reconciled.

Assessment

Primary assessment: prenatal or gynecologic follow-up with anemia and glucose screening needs. Patient is clinically stable for ongoing management. Risk considerations include renal dosing, medication safety, fall risk, and need for timely escalation if red-flag symptoms occur.

Plan

Review CBC, glucose screen, and BP trend. Educate on warning signs including severe headache, bleeding, or decreased fetal movement. Schedule follow-up per OB protocol. Provide patient education, update care team via SBAR, and document any access-relevant clinical justification before AI-assisted retrieval of PHI.

Detailed Care Coordination Notes

Problem List

1. prenatal or gynecologic follow-up with anemia and glucose screening needs. 2. Medication safety monitoring. 3. Functional status and discharge readiness. 4. Follow-up coordination with Obstetrics & Gynecology.

Safety Triggers

Escalate to responsible clinician for SBP < 90, HR > 130, SpO2 < 92%, acute mental status change, active bleeding, severe pain, fever with neutropenia risk, or rapidly rising Cr/K.
